## Bài 6.

(i) Cài đặt cho lớp tài khoản (Account) được thiết kế như sau:

```
Account

- accountNumber : long

- name : String

- balance : double

- RATE = 0.035 : final double

<<constructors>>

+ Account()

+ Account(accNumber : long, name : String, balance : double)

+ Account(accNumber : long, name : String)
```

Bài tập Lập trình hướng đối tượng - I

## Module 2. Các khái niệm cơ bản I

```
<<pre><<pre><<pre><<pre>
+ getAccountNumber() : long
+ getBalance() : double
<<ohref="font-size: style="font-size: style: style="font-size: style: style
```

```

```

Module 2. Các khái niệm cơ bản LT HĐT

Hàm tinhSoThangGoiThuc(): tính số tháng gởi thực phải dựa vào ngày mở số và kỳ hạn gởi. Ví dụ, nếu gởi ngày 1/5, kỳ hạn 3 tháng và ngày 15/9 tính tiền lãi thì số tháng gởi thực chi là 3. Tiền lãi tính theo số tháng gởi thực

Constructor KhachHang(String, String, int): khởi tạo một khách hàng với mã, họ tên và số lượng sổ tiết kiệm tối đa được mở.

```

Hiện thực mô hình lớp sau bằng ngôn ngữ lập trình Java.

## Trong đó:

Phương thức calcTotalPrice(): tinh thành tiền = quantity \* price. Constructor  $Order(int\ order ID,\ LocalDate\ order Date)$ : khởi tạo hóa đơn bởi mã hóa đơn (order ID) và ngày lập hóa đơn (order IDs, số tượng cá mắt hàng tối đư trong một hóa đơn là 20. Phương thức  $addLineltem(Product\ p,\ int\ g)$ ; void, để thêm một sản phẩm p với số lượng q vào hóa đơn. public void addLineltem(Product\ p,\ int\ g) { intelieus}. add(new Order Đetall(p,\ w));

```
